This report from the Bay Area Social Services Consortium detailed a review of 85 family assessment instruments based on seven criteria, which resulted in the identification of seven comprehensive instruments best suited for child welfare settings. The seven instruments described in the report are: (a) the North Carolina Family Assessment Scale (NCFAS) and two modified versions of the NCFAS, (b) the NCFAS for Reunification (NCFAS-R), (c) the Strengths and Stressors Tracking Device (SSTD), (d) the Family Assessment Form (FAF), (e) the Family Assessment Checklist (FAC), (f) the Ackerman-Schoendorf Scales for Parent Evaluation of Custody (ASPECT), and (g) the Darlington Family Assessment System (DFAS). The report also shared instruments that are useful for assessment in specific domains and points in time, such as patterns of social interaction and support, parenting practices, background characteristics, and basic needs.

<http://onlinelibrary.wiley.com/doi/10.1111/1467-6427.00147/epdf>

This journal article provided an overview of the Darlington Family Assessment System (DFAS) and guidance for practitioners using the tool within a clinical setting. DFAS is administered as a semi-structured interview and is designed to look at health issues within a family-development framework. DFAS considers the child perspective, the parental perspective, parent-child perspective, and the whole family perspective in its assessment. It is designed to be used in a variety of therapeutic approaches and is useful in informing the types of interventions that will likely be effective given the family dynamics. The article outlined the evidence-base for using the tool to train novices in the child mental health field, the ability of DFAS to differentiate among families, and the clinical implications of the system.

**Alderfer, M. A., Fiese, B. H., Gold, J. I., Cutuli, J. J., Holmbeck, G. N., Goldbeck, L., ... - Patterson, J. (2008). Evidence-based assessment in pediatric psychology: Family measures. *Journal of Pediatric Psychology*, 33(9), 1046-1061. doi: 10.1093/jpepsy/jsm083**

**<http://jpepsy.oxfordjournals.org/content/33/9/1046.full.pdf+html>**

This journal article outlined a review and evaluation of family measures relevant to pediatric psychology. A seven-member workgroup convened to review 29 family measures that assess general family functioning, dyadic familial relationships, or families in the context of childhood chronic illnesses. Of those assessed, 19 were deemed "well-established" according to three criteria: (a) the measure has been presented in at least two peer-reviewed articles by different teams, (b) sufficient detail is presented to allow for critical evaluation and replication, and (c) information has been presented in at least one peer-reviewed article to indicate good reliability and validity. In addition, ten measures were deemed "approaching well-established" according to three criteria: (a) the measure has been presented in at least two peer-reviewed articles, possibly by the same team; (b) sufficient detail is presented to allow for critical evaluation and replication; and (c) reliability and validity are moderate at best and presented in vague, non-numeric terms.

**<http://www.fatherhood.gov/sites/default/files/files-for-pages/Inventory%20of%20Measures-Child%20Trends%20March%2006-09.pdf>**

This document provided measures of father involvement with children and families that can be used by fatherhood programs, including those focusing on non-custodial fathers. The measures cover a range of relevant topics, including father well-being, social support, father-mother/partner relationship, father involvement, co-parenting, measures for non-resident fathers, and child support arrangements. In addition, all measures have been used in large- or small-scale surveys or studies.

**Kendall, S., Rodger, J., & Palmer, H. (2010). *The use of whole family assessment to identify the needs of families with multiple problems* (Research Report No. DFE-RR045). London, England: United Kingdom Department for Education.**

**[https://www.gov.uk/government/uploads/system/uploads/attachment\\_data/file/181688/DFE-RR045.pdf](https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/181688/DFE-RR045.pdf)**

This report, prepared for the United Kingdom Department for Education, highlighted examples of local agencies that use whole-family assessments in families experiencing multiple issues affecting child and family well-being. The report detailed the process used by these local agencies, and outlined positive outcomes that resulted from taking a family-focused approach. Among the positive outcomes are reduced risk levels, allowing children to remain within their own homes. This approach has also allowed agencies to more quickly identify child safety concerns and move to action.
